

Brooklawn

Kentucky Bluegrass

You Have to Have this Variety In Your Blends!

The whole purpose of blending is to broaden genetic diversity, not narrow it. Brooklawn Kentucky Bluegrass is an excellent choice as a mono-stand and a blending variety. As a "shamrock" type, Brooklawn has disease resistance, high crown rust and powdery mildew resistance, and was rated at the top in NTEP trials for turf quality, color and texture.

RATED #1 in Disease Resistance
in the 2001 NTEP Turf Trials

Excellent Winter Density & was
ranked 6th among all entries in Sod
Stretching Strength Tests

Tops in the NTEP Turf Trials for
Turf Quality, Color, & Texture

Aggressive Rhizome Development
Ideal for quick establishment
and sod farms

What is a "Midnight Type"?

A compact type with similar leaf texture and mowing potential. These elite Bluegrasses have produced attractive, saleable sod wherever bluegrass is adapted.

3

1 Disease Resistance

Brooklawn establishes quickly and has aggressive Rhizome development which makes it an excellent choice in blends for sod farms. It doesn't get powdery mildew or crown rust which makes it an excellent choice to blend with the "Midnight" types. Brooklawn has excellent winter density.

2 Aggressive Rhizomes

With Brooklawn's aggressive rhizome development, sod farms can enjoy quick establishment making it an excellent choice for blends. Brooklawn's high tensile strength greatly increases its wear tolerance and liftability.

3 Top Performance

Brooklawn is the Holy Grail in Kentucky Bluegrass breeding with top performance that yields enough seed to make it economical for turfgrass users.
